## **Bullet Seating Micrometers for Standard Redding Straight Wall and Handgun Seating Dies**

Cortland , NY.....The Redding competition seating dies for straight wall cases have set a standard for precision and accuracy in the most discriminating of handloading circles. Be it a Three Gun event or a Cowboy Action Shooting Championship, Redding Competition Seating Dies create an edge serious competitors swear by. They are truly the envy of all other seating die products when a championship is on the line. Now, Redding has created a series of new optional Bullet Seating Micrometers for use with their standard seating dies in popular handgun and Straight Wall calibers. These new Bullet Seating Micrometers will not only increase precision but they also speed set up process over a standard seating stem or “plug”.

These Bullet Seating Micrometers are direct replacements for the original seat stems and also feature a dead stop on the threads allowing full and accurate repeatability even if changed from one die to another. The micrometer is graduated in increments of 0.001” to assure precise seating depth control and they are offered by number to match the numbers stamped on the tops of the original seat plug which was shipped with the dies.

The new Redding Micro Precision Seating Stems are available for both standard bullet shapes as well as newly designed Flat Nose combinations. These allow the user to accurately and reliably seat to proper COAL, with wadcutter and semi-wadcutter styles of bullets.

Precision has long been Redding’s hallmark and now the high level precision of a micrometer seating stem can be added to the Redding dies you have on your bench at home. These new items will be in full retail distribution shortly after the 2017 SHOT Show in Las Vegas.

Redding Reloading Equipment has focused on building the finest quality, American Made products for the precision handloading market since 1946. To find more information and to request a copy of the new 2017 Redding catalog visit:
