Micrometer Precision Seating Stems for Standard Redding Seating Dies.

Cortland , NY.....The Redding competition seating dies have set a standard for precision and accuracy in the most discriminating of handloading circles. Numerous world records are set and championships won each season with these dies. Now, Redding has created a series of new optional Micrometer seating stems for use with their standard seating dies in popular rifle calibers. These new Micrometer Seaters will not only increase precision but they also speed set up process over a standard seater stem or “plug”.

These Micrometer seating stems are direct replacements for the original stems and also feature a dead stop on the threads allowing full and accurate repeatability even if changed from one die to another. The micrometer is graduated in increments of 0.001” to assure precise seating depth control and they are offered by number to match the numbers stamped on the tops of the original seat plug which was shipped with the dies.

The new Redding Micro Precision Seating Stems are available for both standard bullet shapes as well as newly designed VLD only combinations. These allow the user to accurately and repeatably seat to proper OAL, the longer nosed VLD style of projectiles which are becoming ever more popular throughout a broad range of calibers.

Precision has long been Redding’s hallmark and now the high level precision of a micrometer seating stem for precise depth control is available for the Redding dies you have on your bench at home. Anticipated price is expected to be less than \$50.00 and availability is early Spring of 2011.

Redding Reloading Equipment has focused on building the finest quality, American Made products for the precision handloading market since 1946. To find more information and to request a copy of the new 2011 Redding catalog visit:
