Redding Offers Precision Powder Measuring for The Long Range Varmint Hunter

Cortland , NY.....For years, Redding has built and sold the Competition Model BR-30 for the highly demanding Bench Rest shooting community. This measure was designed to throw incredibly precise charges of powder in a range from 10 and 50 grains with an emphasis on the critical BR charges of around 30 grains. Today's varmint hunters have continued to add precision and range to their shots by employing numerous Bench Rest handloading techniques when making their long range hunting ammunition. Most Popular Varmint cartridges of today are also loaded with powder charges in the same "sweet spot" this measure was designed for, around the 30 grain mark. Making it the perfect addition to a precision loading bench. Additionally, Redding now offers a 17 and 20 caliber drop tube adapter making direct charging of these smaller necked cases simple, fast and very precise.

Now the serious Varmint Hunter intent on challenging him or herself with the longest and most precise shots, can do so more quickly and accurately, without the need for trickling powder for each load..... *In retrospect maybe Redding should have named it the VR-30.*

The Redding Competition Model BR –30's included features are:

- Micrometer adjusting metering chamber with hemispherical cup
- Cast iron and hard chrome construction
- Special Backlash eliminating micrometer for repeatability
- Adjustable powder baffle
- Positive metering chamber lock

The 17 and 20 caliber drop tube adapter is available from most major resellers and carries a part number of, 03817.

Redding Reloading Equipment has focused on building the finest quality, American Made products for the precision handloading market since 1946. To find more information and to request a copy of the new 2012 Redding catalog visit:
